WHAT I BUILT

- 10-year historical and forecast financial model
- Integrated Income Statement, Balance Sheet and Cash Flow
- Revenue, operating cost and EBITDA forecasting
- Working capital and PP&E; / depreciation schedules
- Free Cash Flow to Firm calculation
- WACC using CAPM and bottom-up beta
- DCF using Perpetuity Growth and Exit Multiple
- Comparable-company valuation using EV/Sales, EV/EBITDA and P/E

KEY MODELLING DECISIONS

Revenue: FY27E growth assumptions were built at the revenue-head level, with passenger service, cargo, in-flight sales and other revenue forecast separately.

Margins: EBITDA margin normalizes from 15% in FY27–28 toward 10% by FY30–31.

Working capital: Receivables, payables and inventory are linked to operating-day assumptions.

WACC: 8.0% base case, supported by CAPM, bottom-up beta and capital structure analysis.

VALUATION OUTPUT

Valuation Method	Enterprise Value Enterprise Value	Equity Value Available for Shareholders Eq. Value	Equity Value Per Share Eq. Value / Share	Discount/Premium % Upside / Downside
DCF — Perpetuity Growth	274,557 Cr	234,702 Cr	6,071	19.3%
DCF — Exit Multiple	292,213 Cr	252,358 Cr	6,528	28.3%
Relative — EV / Sales	208,056 Cr	168,201 Cr	4,351	(14.5%)
Relative — EV / EBITDA	164,532 Cr	124,678 Cr	3,225	(36.6%)
Relative — P / E	—	56,535 Cr	1,462	(71.3%)

WHAT THIS WORK DEMONSTRATES

- Ability to connect operating assumptions to financial statements and valuation.
- Practical understanding of enterprise value vs. equity value.
- Ability to triangulate valuation through DCF and trading comparables.
- Sensitivity analysis to assess valuation risk rather than relying on a single point estimate.
